Internetcomponent.com is the industry leader in providing software component products, services and resources that facilitate the rapid development of software systems for business. In addition, we offer quality assurance testing, auction-based outsourcing, an open component registry and programming articles and resources, as information technology evolves, Internetcomponent.com will continue to pioneer new component-based development tools and services so organizations can more quickly deliver quality products to market.

global solutions delivery & re-usable internet software component development are helping develop internet solutions faster, cheaper and more reliably for our clients. new efficiencies & opportunities are arising out of this model using the tens of components (dll/com/dcom/web classes, beans/ejb, (jsp/applet/servlet, cf, scripts bank (javascript/perl/cgi) in our global 24-hour development deliver mechanism. with technology increasingly becoming a commodity, smart organizations are increasing their profitability by outsourcing the software development process to global partners such as us who rely on off-shore & re-usable components development models. by utilizing a global work-force, leveraging a re-usable component assembly process, & using integrated development environments,

partnership with nete can reduce the cost of technology development by almost 35-50% over existing development costs.

please visit www.internetcomponent.com for more details on our reusable components catalog.
